Conclusion / Workshop 2

Innovation & Security are not contridictionary:

- Security is an important and inhernet part of the complete lifecycle of Innovation / Managment etc.
- Liability claims (vendor vs user vs operator)

- Comliance / security is a way to make money (versus just pay)
- Security is not an end in itself (threat scenarios)
- Cybercrime as a Service is a business case
- Classical industry changes are taking place – next internet companies
- Userpower

- In „classical industries" security by design is not always a given
- Open Innovation
- education about security topics (Strenghth & weaknesses) is needed
     In ordner to prevent an anti inovative climate
